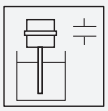
Capacitive limit switch

LCL1



- Limit switch for bulk solids
- Device with rod probe
- Complete unit consisting of the probe and electronic insert
- Integrated active build-up compensation: exact switch point, even with strong build-up
- Mechanically rugged: no wearing parts, long operating life, maintenance-free

Function

The capacitive limit switch is designed for limit detection of light bulk solids, e. g. grain products, flour, milk powder, animal feed, cement, chalk or plaster.
Versions:

- Device with 140 mm (5.5 inch) rod probe, for bulk solids
- Relay output (potential-free change-over contact) with AC or DC connection
- PNP output with 3-wire DC connection

Connection

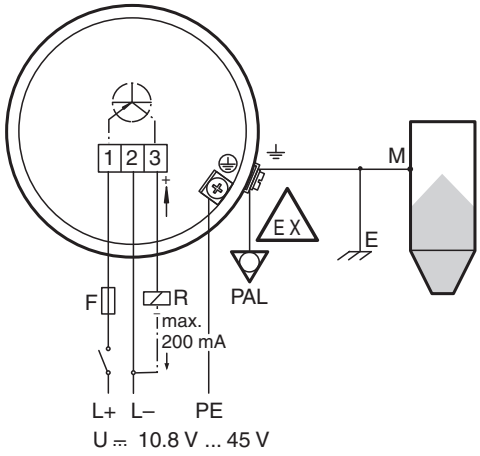
Connection type E5, 3-wire DC connection (example)

3-wire DC connection

F: Fine-wire fuse, 500 mA
R: connected load, e. g. PLC, DCS, relay
M: Connection to ground, silo or metal parts silo
E: Grounding

The LCL is protected against reverse polarity. In case of mixing up the connections, the green LED does not illuminate "ready to operate".

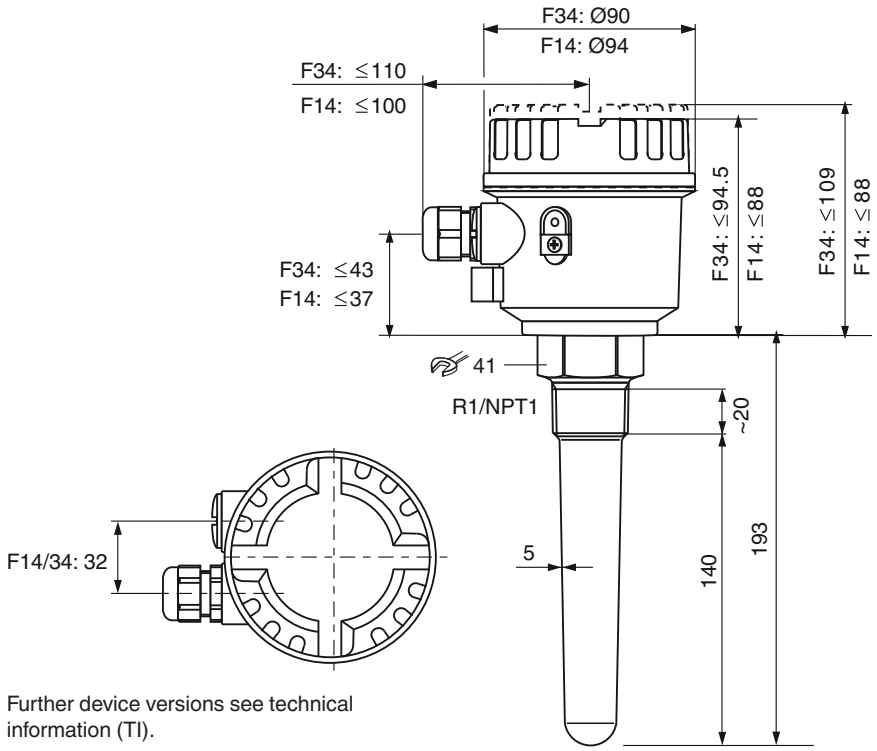
PE-connection and PAL-connection for LCL1 are unnecessary.



Other connection types see section electrical connection.

Release date: 2023-09-11 Date of issue: 2023-09-11 Filename: 271947_eng.pdf

Dimensions



Further device versions see technical information (TI).

Technical Data

General specifications		
Measuring method		A metal plate at the end of the probe, within the insulation, and the surroundings (e. g. the silo walls) combine to form the two electrodes of a capacitor. If the probe is covered or free of material, then the capacitance changes and the LCL switches.
Equipment architecture		The measuring system consists of: - the device - a supply point - the connected control systems, switching units, signalling systems (e. g. lamps, horns, PCS, PLC, etc.)
Construction type		device with rod probe
Operating mode		MAX = maximum safety: The device switches if the probe is covered or if the supply voltage is disconnected in a safety-oriented manner (signal on alarm). example application: overspill protection MIN = minimum safety: The device switches if the probe is uncovered or if the supply voltage is disconnected in a safetyoriented manner (signal on alarm). example application: dry-running protection
Series		LCL1
Supply		
Rated voltage	U_r	electrical connection E5: 10.8 ... 45 V DC, short-term pulse on 55 V DC electrical connection WA: 20 ... 235 V AC, 50/60 Hz or 20 ... 55 V DC
Current consumption		electrical connection E5: max. 30 mA, reverse-polarity-proof electrical connection WA: max. 130 mA
Electrical specifications		
Surge protection		overvoltage category III
Input		

Release date: 2023-09-11 Date of issue: 2023-09-11 Filename: 271947_eng.pdf

Technical Data

Measured variable		limit level (limit value)
Measurement range		dielectric constant ≥ 1.6
Output		
Switch-on delay	t_{on}	correct switching after max. 1.5 s
Output signal		connection E5: switching PNP, I_{max} = 200 mA - overload and short circuit protection - residual voltage at transistor at I_{max} < 2.9 V connection WA: contact change-over, potential-free - U_{max} = 253 V - I_{max} = 4 A (AC) - P_{max} = 1000 VA, cos ϕ = 1, P_{max} = 500 VA, cos ϕ > 0.7
Signal on alarm		connection E5: < 100 µA connection WA: relay de-energized
Directive conformity		
Electromagnetic compatibility		
Directive 2014/30/EU		EN 61326-1:2006 , EN 61326-2-3:2006
Low voltage		
Directive 2014/35/EU		EN 61010-1:2010
Conformity		
Electromagnetic compatibility		NE 21
Degree of protection		IEC 60529:2001
Vibration resistance		EN 60068-2-64
Climate class		EN 60068, part 2-38 (test Z/AD)
Measurement accuracy		
Reference operating conditions		vessel type: plastic vessel, ambient temperature: 73 °F (23 °C, 296 K), medium temperature: 73 °F (23 °C, 296 K) medium pressure p_e: 0 bar, medium: dielectric constant = 2.6, conductivity: < 1 µS sensitivity setting: C
Hysteresis		horizontal 4 mm (0.16 inch), vertical 7 mm (0.28 inch)
Long-term drift		horizontal 3 mm (0.12 inch), vertical 6 mm (0.24 inch)
Influence of medium temperature		depending on the filling material
Switching time		approx. 0.5 s when covering and uncovering the sensor
Operating conditions		
Installation conditions		
Installation position		any position
Mounting location		The capacitive limit switch can be installed in silos made of different materials (e. g. metal, plastic, concrete).
Process conditions		
Process temperature		-40 ... 130 °C (-40 ... 266 °F) -40 ... 80 °C (-40 ... 176 °F) (Dust-Ex version)
Medium pressure limits		-1 ... 25 bar
State of aggregation		solids
Solid contents		≤ Ø 30 mm
Bulk density		≤ 200 g/l
Ambient conditions		
Ambient temperature		-40 ... 80 °C (-40 ... 176 °F) -40 ... 60 °C (-40 ... 140 °F) (Dust-Ex version)
Storage temperature		-40 ... 80 °C (-40 ... 176 °F)
Shock resistance		device with F34 housing: 7 J
Vibration resistance		a(RMS) = 50 m/s², ASD = 1.25 (m/s²)²/Hz, f = 5 to 2000 Hz, t = 3 x 2 h
Mechanical specifications		
Degree of protection		IP66, NEMA 4
Connection		gland M20 thread G1/2, NPT1/2
Material		F14 housing: polyester PBT-FR F34 housing F34: aluminum Probe: PPS GF40
Dimensions		max. Ø94 mm (3.7 inch), length 391 mm (15.4 inch)

Connection

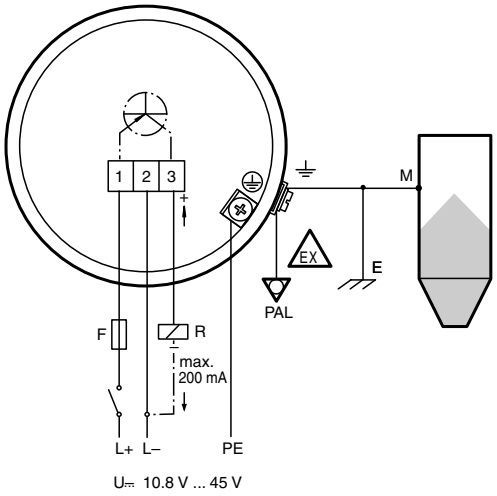
Electronic insert E5

3-wire DC connection

F: fine-wire fuse, 500 mA
R: connected load, e. g. PLC, DCS, relay
M: connection to ground, silo or metal parts silo
E: grounding

The LCL is protected against reverse polarity. In case of mixing up the connections, the green LED does not illuminate "ready to operate".

PE-connection and PAL-connection for LCL1 are unnecessary.



Electronic insert WA

AC/DC connection with relay output

F1: fine-wire fuse for the protection of the relay contact, dependent on the connected load
F2: fine-wire fuse, 500 mA
M: connection to ground, silo or metal parts silo
E: grounding

PE-connection and PAL-connection for LCL1 are unnecessary.
